Programming in C++

Programming in JAVA

Software Engineering

### MY PROJECTS

Cloud Based POS

This is my Mini-Project and project is about security system face is recognized and get into the payment mode. And that server will take upon to another on. I have done with flask programming and python .To get access the AWS we had done some thing in uduntu os of my friends. EC2 module is very much help full for doing this one in the instances . Basically this video is of the for presenting the project. You can watch this in youtube. 📺

3D-Website using THREE.JS

In this project I have used a very high AI script THREE.JS. The 3D-Models where rotate in the webserver.While doing this project I felt very enthusiastic.

Visual Sound using PAPER.JS

While we press any key in the keyboard the sound arise.This will create an music like piano.I have used PAPER.JS and it is very much advanced script.

Optical Text Recognition

The basic 0-9 digits are recognized by the machine . This is pure ML & AI project.
